Our #1 Selling Product

C4 is a powerful foliar concentrate that simply turns up the plants immune system. It puts the plant into high gear to accelerate growth and enhances overall plant health. It has proven itself to be a game changer when it comes to how we traditionally view plant fertility.

*“Our soybeans were **LOADED** this year! I’m totally impressed! We used US Ag’s C4 product and grew the best soybean crop we have ever had! We had a year of extreme wet conditions followed by an extreme dry period that should have ruined our crop; instead we have outstanding crop health! We grew soybeans with no fungicide or pesticide and our fields are fungus and pest free! It’s outstanding what this product can do! We normally average 35bu per acre; but this year with the use of C4 we **did 70bu per acre!!!** US Ag has made me a true believer in what this product can do!”*

-Tray, OK

One significant reason why C4 works so well is its delivery system. C4 was engineered to maintain high availability of its proprietary ingredients to the plant. Availability is key. What good is it to pour lots of fertilizer on your crop if only a small percentage of it is available? Doesn’t sound smart does it? We created C4 to be highly available, highly concentrated and highly effective so you quite simply get the best product your money can buy!

C4 is also very affordable. On average most farmers who use C4 lower their overall input costs and at the same time raise their profits! Typically, C4 will replace at least one product you are currently using and often it takes the place of several; plus it does a whole lot more!

Increase Production
Cut Costs
Increase Profits

*“We grew outstanding confectionary sunflowers this year using US Ag’s program. The plants had huge heads and we had to slow our combines down to 4mph and couldn’t keep up even using 2 trucks! **Our yields were outstanding this year at 3,000 lbs. per acre!** Before using US Ag’s program we normally would only do 1,800 lbs. per acre. This has been our most profitable year ever!”*

-Mike, SD

C4 has the potential to make farming extremely profitable for you!

Time and time again everyone who uses C4 comes back with the same story - “We used C4 and it virtually eliminated the need for us to spray pesticides” “Our fields are almost fungus and insect free and the only thing we did differently was spray C4”. **It appears that C4 is strengthening the plants immune system to the point at which the plant can naturally defend itself against pests.** This illustrates the incredible potential that C4 has. C4 gets the plant healthy making it less susceptible to attack; lowering the need for pesticides.

“We have problems with fungus in our fields every year. This year we used some C4 as a foliar and to our surprise we made it through the entire year without having to use any fungicide! We looked at several fields and didn’t see any trace of fungus anywhere! I’m sold on this stuff!”

-NE Farmer

“The corn crop this year looked tremendous! It’s was healthy as possible. We didn’t use any fungicide, but with 2 applications of C4 we saw no fungus in the fields. We were extremely satisfied with the program and the results!”

-Brandon, CO

*“We used US Ag’s program including C4 on all our crops with great results. Everything responded well and we had no disease or fungus in any of our fields thanks to C4. Our beans were podded all the way to the top, had really good color, excellent nodules, and were **the best beans I have ever grown!** We also had a phenomenal year on our dryland corn where we used C4 and had a **yield increase of nearly 40%!”***

-Larry, SD

C4 has had a huge impact on crops grown during extremely adverse weather conditions. It seems that everyone who uses C4 ends up with a better crop than all their neighbors during draught, frost, hail, floods, ect.

*“This was a terrible growing season where we had bad weather and everything was against us; yet our corn and soybean crop did fantastic! The beans look good, filled out completely and were loaded with nodules. **Our corn had bigger ears and uniform size than all my neighbors while using substantially less nitrogen than they did.** Our yields were excellent on US Ag’s program and I would recommend them to anyone!”*

-Orville, MN

*“This year was not conducive to growing crops. With that said we did in fact grow an excellent crop because of US Ag’s program. We were able to cut our nitrogen rates in half on our corn, used no fungicide or insecticide and had no fungus or insect pressure. **US Ag’s program grew an outstanding crop and saved me a lot of money at the same time!”***

-Bob, MN

No matter what you grow C4 can help you grow a better crop.
